Dear Patient,

Welcome to our office! We look forward to meeting with you, reviewing your medical history, and working together to address the causes of your pain.
Enclosed you will find a patient questionnaire. It is very important that you take the time to complete this prior to your initial visit. This information will help us understand your condition and current overall health, so we can best treat your pain, and all aspects of your spine related disorders.

The doctors in our practice work collaboratively with NP's and PA's to enhance your care and help you get faster relief. We are a multi-disciplinary office and offer the latest state of the art medical and pain management care, along with chiropractic care, massage therapy, and physical therapy. Research has shown that collaborative care results in better clinical outcomes and faster results.
A NP/PA will be assigned to your case and monthly office visits will be scheduled with the assigned provider. If any injection procedures under fluoroscopy are requested for your treatment, it will be performed by a doctor.

Due to HIPAA regulations, it is your responsibility to obtain as many medical records as possible that are available to you. This includes office visit notes and diagnostic testing (i.e., MRIs, X-rays, CT scans, EMG reports). Complete and accurate information will enable us to meet your medical and other needs appropriately. Failure to do so, may result in a delay of treatment, as our review of records are essential in determining the best way to relieve your pain.

Please be sure to complete and sign the "Authorization to Obtain Health Information" form. If you need copies of your records from this office, we require two weeks notice to process. A signed written request must be presented to our office with specific details of the records you are requesting.

Please bring the following to your appointment:

1. Driver's license/ Photo ID
2. Health Insurance cards
3. Imaging reports (MRIs, CTs, X-rays, etc.)
4. If applicable, Referrals or related medical records
5. Co-payment due upon arrival

Thank you very much for your cooperation. We look forward to meeting you.

Sincerely,

Timothy Groth, MD. Medical Director and Director of Pain Management

PAIN MANAGEMENT RISKS AND COMPLICATIONS AGREEMENT

INTERVENTIONAL PAIN MANAGEMENT injections are safe and have a long track record with complications occurring rarely. However, the complication rate is not 0%. The most common complication is a post dural puncture headache (Spinal Headache), which occurs in approximately one percent of cases.

CORTISONE INJECTIONS may have the following side effects: increased appetite, facial flushing, fluid retention, increased heart rate, feeling energized. Frequent, repetitive cortisone injections can increase bone loss, and contribute to osteoporosis. Therefore, we recommend that you take calcium and vitamin D.

EXTREMELY RARE COMPLICATIONS including bleeding, infection, or adverse reaction to medication, which can result in death, paralysis, loss of bowel or bladder control, increased pain or weakness, or the need for emergency surgery.

I have been informed of the risk of developing tolerance, or an addiction to opioids, and also the risk of addiction to any newborn children of female patients taking opioids while pregnant.

I give permission of the prescribing physician to contact my pharmacy directly, at the physician's discretion, to review and evaluate data. My signature below grants permission to release such requested information.

I, _____, understand all of the above and will comply.
